Point worth keeping in mind: the CT90 has battery-operated ignition, but a clone engine typically has AC magneto ignition. This means the ignition switch on the stock Honda sends and cuts battery power, while a Lifan engine kills the spark using a ground-to-kill switch. In my diagrams, I solve this problem using a common automotive relay.

The cooler the oil, the more heat can be extracted from the engine. An oil cooler has much the same function as a radiator in a water cooled engine. Both are taking a heated liquid, cooling it down and returning it in a continuous heat/cool cycle. Circulating another 1/2 quart of oil that is in the oil cooler can't hurt either.
